1. Introduction and Project Overview

Briefly describe the basic project concept. Describe the current business situation as it relates to the problem or opportunity that gave rise to the idea, including any other drivers such as regulatory or legal compliance requirements

If taking no action may have a negative effect on the organisation, then also describe what will happen if the project is **not** undertaken.

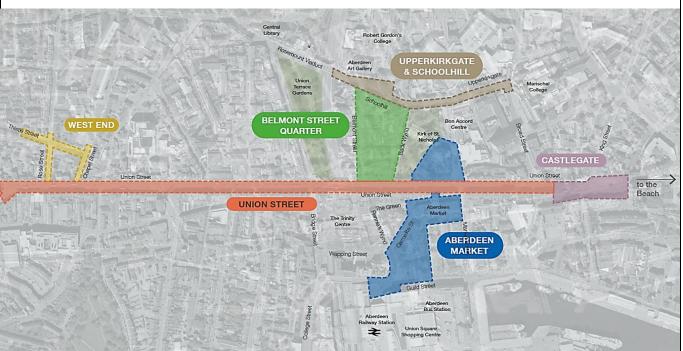

This paper set out a Full Business Case (FBC) to support a series of streetscape improvements across Aberdeen City Centre. They will complement, and be delivered alongside, the construction of Aberdeen Market. This FBC includes full funding costs to begin construction work on the following projects:

- Union Street Central: public realm, streetscaping improvements and traffic control measures on the section of Union Street between Union Terrace and Market Street
- Market to Guild Street Phase 1: public realm and streetscaping improvements to the area immediately surrounding the new Market Building, including East Green, and Hadden Street, Carmelite Street and across Guild Street to provide improved pedestrian connection between the Rail and Bus Stations and the city centre
- **Upperkirkgate and Schoolhill:** extension of footways and streetscaping improvements to enhance the setting and improve public realm

It also includes a request to provide further funding to support work for future FBC updates for later delivery on the following projects:

- Union Street East and Castlegate: public realm and streetscape improvements to Union Street and Castlegate from Market Street to Castle Street. Includes footpath widening, street furniture, public art, incidental play, improved lighting, enhanced street greening and traffic management measures
- Union Street West and West End: public realm and streetscape improvements to the section of Union Street between its junction with Alford Place & Holburn Street to its junction with Bridge Street & Union Terrace, including increased space for pedestrians and cyclists, improved public transport interchanges, urban greenery, and potential street-trading space
- Market to Guild Street Phase 2: Improvements to Carmelite Street, Correction Wynd, St Nicholas Street and Carnegie's Brae. These complementary projects will be developed following completion of phase 1 of the project
- Market Streetscapes Phase 3: Improvements to Stirling Street, Exchange Street, Imperial Place, Trinity Street and Trinity Lane. Aspirational future investments that will complement the projects above

Figure 1: Streetscape Improvements

These proposals will help develop a city centre which is:

- Accessible and inclusive: ensuring it is designed to support users of all abilities
- More pedestrian and cyclist friendly: by reducing general vehicular traffic levels to create additional cycling and walking space and a network of streets that are designed around the needs of all users
- **More sustainable**: it will improve air quality through the inclusion of urban greenery in the designs and support the promotion of a modal shift from vehicular to active travel
- **More attractive**: it will help the city to achieve its goal of changing people's perception of the city, and establishing a reputation as a distinctive, modern and exciting city to live in and to visit
- **Healthier**: through the encouragement of cycling and walking, users will become more active and physical wellbeing will benefit as a result. Improvements in air quality from reduced use of vehicles will also have a consequent positive effect on people's health

The proposals will also address many of the challenges affecting the city centre, including:

declining footfall and high vacancy rates in city centre retail properties. Savills
Property Market Report describes the structural oversupply of the retail market in
Aberdeen. In October 2022, the Council's vacancy rate BID survey reported that 25%
of all properties on Upperkirkgate; 37.5% of properties in Schoolhill, and 23.8% of
properties in Union Street were vacant. Investment in the public realm, alongside the
development of other city centre projects like Aberdeen Market, will improve the
permeability and attraction of the city centre, increase footfall and reduce shop
vacancy as a result. A similar development in Altrincham, for example, has seen a
decrease in shop vacancy rates of over 22% in seven years following £15 million of
investment into the public realm and a new market¹.

¹ The Pedestrian Pound 2018 – The business case for better streets and places. Available online at: https://www.livingstreets.org.uk/media/3890/pedestrian-pound-2018.pdf

- narrow streets, with limited pedestrian space
- the Market to Guild Street public realm project also addresses poor first impressions of the city, particularly for visitors arriving via the train and bus stations

2. Executive Summary

Provide a clear, concise summary of the key features of the business case, briefly describing what the project will deliver, any key decisions associated with it, the expected costs and the funding position (showing any budgets already identified/ expected and the ask of Capital). Include an outline of the benefits, and any dis-benefits, what risks and assumptions are associated with the project, and summarise planned or agreed dates and time constraints. Indicate who is the project sponsor and how the project will be owned and governed and what form the project board will take.

Purpose

Several projects have been delivered to regenerate and revitalise the city centre, including Aberdeen Art Gallery, Marischal Square, Provost Skene's House refurbishment and Union Terrace Gardens. There are several further projects in development, including the new Aberdeen Market; the redevelopment of Queen Street, the Mini Masterplan for George Street and various projects at Aberdeen Beach. The Aberdeen City Centre and Beach Masterplan was approved in August 2022.

All these projects have the potential to attract footfall to the city centre; to increase visitor dwell times; and to shape people's perceptions of the city as a positive place to live, work, visit and invest.

The purpose of investment in the public realm is to optimise the collective impact of these interventions on visitor perceptions of the city, by delivering a series of streetscaping improvements that will:

- **Provide a positive first impression of the city:** particularly for visitors arriving by train and bus, who need to pass through the Merchant's Quarter en route to the City Centre
- Maximise the impact of the Aberdeen Market project: by improving the immediate surrounding streetscape
- **Create a 'golden thread'**: develop an attractive route with clear way-finding that will connect the investments in Union Terrace Gardens, Belmont Street Quarter, Aberdeen Market, Marischal Square, Queen Street and the Beachfront
- **Improve the Cultural Quarter**: including the streetscape immediately surrounding Aberdeen Art Gallery, the Kirk of St Nicholas and Provost Skene's House
- Create a coherent, legible and consistent streetscape with use of high quality locally sourced (wherever possible) natural materials

This will be achieved through a set of three short-term and four long-term investments. The three short term investments include streetscaping improvements to the following: the section of Union Street Central between Union Terrace and Market Street with construction expected to begin in Q3 of 2023 for 15 months. Improvements to the streets immediately surrounding the new Market Building and linking to the train and bus stations are expected to commence in Q1 2024 for 6 months. Streetscaping work at Upperkirkgate and Schoolhill is planned to commence in Q4 2024 for 14 months. This business case seeks approval to

move into the delivery stage and enter into contract to progress the technical design and construction work on these project elements.

The four longer-term investments include Union Street East and Castlegate, Union Street West and West End, and phases two and three of the Market to Guild Street public realm improvements. The delivery plan for the longer-term investments will follow pending an update to this FBC scheduled to be complete by the end of 2023.

Strategic Fit

The project will contribute to the Prosperous Economy and Prosperous Place objectives of the LOIP, and to the Changing Perceptions, Growing the City Centre Employment Base, A Metropolitan Outlook, A Living City for Everyone, Technologically Advanced and Environmentally Responsible, and Culturally Distinctive objectives of the City Centre and Beach Masterplan.

Project Objectives

The proposals form an important early phase of the wider Aberdeen City Centre and Beach Masterplan developments, and will contribute significantly to a number of objectives of that plan:

Objective	Success criteria	CCBMP Measurement
City centre population growth	More people live, work, and use city centre facilities	3,000 extra people living in the city centre by 2040
Increased Gross Value Added	Still having the highest GVA per head in Scotland	£s per annum
Reduction in crime (actual)	Offences and crime figures in a downward trend in the city centre	30% fewer young people (12 to 17) charged with an offence and a crime by 2026 2% fewer people re-convicted within one year by 2026 1 point increase (4.31 -> 5.31) (/7) in the mean score for people who "Feel safe in the city centre throughout the day and night" by 2026
Increased footfall in the city centre	More locals, visitors and tourists visiting Aberdeen throughout the year	10% increase in daily average footfall in the city Centre by 2026
Reduced Office/Retail vacancy rates in the city centre	Less empty office/retail space in the city centre	2 percentage point (13.99% ->11.99%) decrease in the office vacancy rate and 1 percentage point (6.39% -> 5.39%) decrease in the retail vacancy rate in the city centre by 2026
Increased ease of walking and cycling around Aberdeen	More active travel across all demographics	30% (1,244 -> 1,617) increase in average daily cycling in the city centre by 2026.
Reduction in car journeys in city centre	Fewer cars in the city centre	20% reduction in average daily traffic flow by 2026
Reduction in CO2/NO2 emissions	Ongoing reductions in CO2/NO2 emissions in the city centre	By at least 61% by 2026 and Net Zero Carbon by 2045 Reduce NO2 to <35ug/m3 annual mean in the city centre by 2026.

	Increased educational attainment, skills, and lifelong learning	Improved education outcomes	To match or be under Scotland's density of skills gaps in each occupation groupings (High Skilled, Middle Skilled, Service and Labour Intensive) by 2026	
--	---	-----------------------------	---	--

This business case recommends that Option 3 of improved City Centre Streetscaping (2 lane with bus laybys) should be carried forward as the preferred option.

Project Benefits

An increase of 20% in footfall and retail sales has been assumed, based broadly on the experience of a similar redevelopment in Altrincham². There are examples of similar developments across Scotland, however, there is no supporting empirical evidence of the impacts of the projects. However, the redevelopment in Altrincham does have publicly available data and also surrounded public realm improvements and the introduction of a new market. Given the complementary Aberdeen Market project and the streetscaping proposals in this project, this development in Altrincham was deemed an appropriate benchmark of which to base the economic assessment.

The streetscaping project in Altrincham assumed a 25% uplift to footfall and retail sales, but this uplift has been reduced for the purposes of this assessment due to different location characteristics in Aberdeen relative to Altrincham. This prudent assumption is based on the larger untapped market available to Altrincham as a town in the conurbation of Greater Manchester. Streetscaping improvements could attract footfall away from the city centre to the town, whereas Aberdeen has limited opportunities 6ttarct footfall from further afield than the city itself.

The contribution to retail and food & drink GVA, construction spend impacts and active travel impacts are expected to result in £147.5m (PV) in benefits over a 30-year appraisal period.

Wider non-monetisable benefits include improvements to air quality, public health and wellbeing.

Project Costs

Total project construction costs are in the order of £45.7m. This is inclusive of inflation, and Optimism Bias. However, VAT is excluded. The total capital cost includes:

- £20.0m for Union Street Central
- £5.1 million for Market Streetscape Phase 1
- £21 million for Schoolhill and Upperkirkgate

Project Delivery

The project will be procured through the Hub model as this will accelerate the procurement process and help to secure best value by providing access to Hub North Scotland Limited's supply chain network and project management resources.

Risks and Assumptions

Key risks facing the project include a general lack of material and resource availability and costs/inflation escalating over and above available funding. A full breakdown of risks is provided in Section 10. The economic modelling was informed using various industry standard sources/tools including Scottish Annual Business Statistics and the Department for Transport's Active Mode Appraisal Toolkit (AMAT).

² The Pedestrian Pound 2018, The Business Case for Better Street and Places, Page 33. Available online at: https://www.livingstreets.org.uk/media/3890/pedestrian-pound-2018.pdf

Aberdeen City Council is the sponsoring organisation for this project. Aberdeen City Council will deliver the projects through their delivery partner Hub North. The project team will report to the ACC/Hub North programme board, which will meet monthly to provide governance and oversee each of the projects.

3. Strategic Fit

This section will consider how the project fits with the list of projects identified in the Local Outcome Improvement Plan). Firstly, state if the project is identified within the LOIP. If it is not, how does it work with the Council's strategic objectives such as:

- Prosperous Economy
- Prosperous People (Children & Young People)
- Prosperous People (Adults)
- Prosperous Place

The project supports each of the following City Centre and Beach Masterplan objectives:

- **Economy:** To increase footfall and dwell time in the city centre and routes to/from it, supporting vibrancy and economic recovery for all. The project improvements to public realm will attract visitors and enable businesses to maintain and grow their employment base
- **Inclusion:** Creating inclusive and accessible spaces for all. The project aims to deliver transformative regeneration that benefits users with disabilities or impairments
- Net zero: Prioritising people and active travel and future proofing our city for our young people. Using local and indigenous materials where possible and introducing urban greenery. The project seeks to facilitate a modal shift away from vehicle use in the city centre through the encouragement of walking and cycling
- **Quality:** Ensuring designs reflect our world class aspirations whilst respecting Aberdeen's characteristics. The project directly addresses this objective through city centre improvements to street furniture and the overall aesthetic of the city centre

The project will improve accessibility and support the Council's commitment to **accessibility and inclusive design** by providing spaces that all visitors and residents can use safely, with dignity, comfort, convenience and confidence.

The designs will allow all users to make effective, independent choices about how they use the building/space without experiencing undue effort or separation. The design will recognise and address the barriers experienced by people with learning difficulties, people who are deaf, deafened and hard-of-hearing and people who are blind or partially sighted or are neurodivergent. The Council will develop operational policy mechanisms and active management plans to ensure that these accessibility improvements do not diminish over time.

The project will be based around inclusive design principles to ensure it reflects the different faiths, disabilities, genders & hidden conditions, and addresses important issues that affect a neurodiverse population. Inclusive Design is a critical component of delivering inclusive, user-centred environments that cater for the needs of all. This will be embedded into all aspects of the design including, for example, lighting and security.

The Council has appointed an accessibility consultant for the proposed programme who have produced a placemaking framework which is rooted in these disciplines but provides assessment and outputs that are aligned to key outcomes, including wellbeing, inclusivity and

safety. The Council will use this framework to assess both existing environments and proposed schemes to ensure that interventions are appropriately targeted and provide solutions that mean the right outcomes for all users, aiming to create an exemplar city centre for accessibility.

Although not explicitly mentioned in the LOIP, the project will contribute to the **Prosperous Economy** and **Prosperous Place** objectives of the LOIP by driving an increase in visitor footfall and visitor dwell times in Aberdeen City Centre and helping the city to redefine itself as a modern dynamic city and as an attractive place to live, work, visit and invest.

Finally, the project aligns to the six place-based principles in the Aberdeen Local Development Plan, creating a city centre that is distinctive, welcoming, safe & pleasant; easy to get to & move around in; adaptable and resource efficient.

4. Business Aims, Needs & Constraints

Provide an overview of the sponsoring organisation and explain how the project supports the existing policies and strategies, and how it will assist in achieving the business goals, aims and business plans of the organisation. Include any relevant information about the current business situation, such as the organisational structures, business model, buildings, processes, teams and technology currently in place.

Aberdeen City Council is the sponsoring organisation for this project. The project's contribution to the Council's aims and objectives are set out in Section 3, and details of the current business situation are set out below.

The project supports the following existing policies and strategies:

- City Centre and Beach Masterplan 2022 the vision for the masterplan is "to create a world class city centre and beach that respects and enhances Aberdeen's unique qualities and characteristics and puts people at its heart"
- Aberdeen Local Development Plan 2022 (ALDP) aims that, by 2035, Aberdeen will be an even more attractive, prosperous, and sustainable European city region and an excellent place to live, visit and do business. We will be recognised for:
 - our enterprise and inventiveness, particularly in the knowledge economy and in high value markets;
 - o the unique qualities of our environment; and
 - o our high quality of life
- Regional Transport Strategy the vision is to provide a safer, cleaner, more inclusive, accessible and resilient transport system in the North East, which protects the natural and built environment and contributes to healthier, more prosperous and fairer communities.
- LOIP the vision set out in the LOIP is that Aberdeen will be 'a place where all people can prosper' by 2026. By this we mean that we want everyone in the city to have the same opportunities, regardless of their background or circumstances.

Other policies and strategies that the project supports includes: Strategic Development Plan (SDP), Economic Policy Statement, Local Development Plan 2020, City Living Report 2017 (and its 2022 update).

Describe the purpose of the project, why it is needed, establishing a compelling case for change based on business needs, e.g. demand for services, deficiencies in existing provision etc. Where are we now and where do we need to get to.

The project will provide improved access to and improve the quality of the visitor experience at Union Terrace Gardens, Belmont Street Quarter, Aberdeen Market, Aberdeen Art Gallery, Provost Skene's House; Marischal Square and Aberdeen Beach, improve visitor's impressions of these sites, and of the city centre more generally, thus optimising the level of benefit derived from these recent and planned future investments.

At present, there is an evidenced structural over-supply of retail in Aberdeen City Centre. High levels of vacant retails units can be seen along Union Street with the Trinity Centre up for sale and Bon Accord Centre in administration. The streetscape programme will deliver a transformative regeneration of public realm works across Aberdeen City Centre. This includes the rejuvenation of over 65,000m2 of public realm, split across 6 key public realm 'streetscape intervention' areas within the historic core of Aberdeen. The project will also help deliver a modal shift away from car use in the city centre and improve air quality.

It will help revitalise the city centre following the adverse impacts of the Covid-19 pandemic on demand for city centre housing, office and retail space; bringing in additional footfall which will support the success of the wider city centre and beach masterplan interventions. The streetscape intervention proposals seek to promote a cleaner and greener city centre – a place where people naturally inhabit to shop, walk, wheel and, most importantly, to dwell.

Identify any constraints, e.g. timing issues, legal requirements, professional standards, planning constraints. What assumptions have been made, and any linkages and interdependencies with other programmes and projects should be explained, especially where the proposed project is intended to contribute to shared outcomes across multiple Clusters.

The project focuses on a set of Aberdeen City Centre streets, some of which have limited physical space for pedestrians (including those with visual and/or mobility impairments), street furniture and cycling whilst continuing to allow vehicular access and turning space for emergency vehicles, deliveries and refuse collections.

The area contains a small number of residential properties. Any development will need to be sensitive to residential amenity including noise, vehicular access and parking.

The streets form part of the City Centre Conservation Area and contain several important listed buildings. Therefore, any proposed changes must ensure the character and appearance of the city centre is preserved and enhanced.

The streetscape programme fits into the city centre element of the wider City Centre and Beach Masterplan and whilst all the works are split into projects - city centre including Union Street and the West End, Aberdeen Market, Queen Street, George Street, the beach area – there are interdependencies of many of the work packages which will require them to be sequenced together.

The project will need to be delivered in a way that addresses adverse impacts on traffic movements, and consideration needs to be given to its impact on access to private car parks and accessible parking spaces.

The project will need to be delivered in a way that does not interfere with wayleaves, rights of way and manages services below ground, utilities and drainage.

State what impact the project will have on business as usual, e.g. temporarily reduce capacity or divert resources.

The project will lead to temporary disruption during the construction process. It will have implications for traffic movement generally. It may lead to further restrictions around periods of access for delivery vehicles, some changes to business & resident parking and temporary relocation of blue badge parking where appropriate. It may require some bus stops and taxi ranks to be temporarily re-located. The CCMP Traffic Management Plan sets out mitigation measures to address the traffic implications of the project and the wider City Centre and Beach Masterplan. Through traffic model testing, a package of measures was identified to support the delivery of the City Centre and Beach Masterplan and minimise the impacts to bus journey times and reliability. Measures are detailed in full in the Traffic Management Plan.

5. Objectives

List the project's objectives. Make these tangible and clear as they will influence which option is recommended and will be used to monitor project progress and success.

The proposals for an important early phase of the wider Aberdeen City Centre and Beach Masterplan developments will deliver the following objectives and the Council's ambitions for the project:

Objective	SMART performance measure
Improve accessibility	 14 additional accessible parking bays. c. 25,000 sqm of dedicated pedestrian space with no obstacles, changes in level etc.
Improve walkability and cyclability of project area	- 20% increase in footfall
Improve quality of streetscape	 C. 150 new seating opportunities within the public realm proposals c. 200 new trees and c. 1600m2 of new planting
Reduction in CO2 emissions and air pollution ³	- 80% reduction in vehicle movements
Attract visitors to Aberdeen	 Footfall counts of 864,411 at city centre access points
Create jobs	 223 construction jobs 428 permanent jobs across city centre
Materials sourced from the local area	 All materials to be sourced locally where possible

³ Requires data on number of vehicle journeys prevented. Then multiply by 0.0014 to get the total tonnes of CO2e impact. This is based the carbon footprint of a 5-mile journey in a standard petrol car (source: https://calculator.carbonfootprint.com/calculator.aspx)

6. Scope

What will the project produce? What are its outputs?

Consider what business services, processes, people and environments will be delivered, affected or changed by the project.

Also define the work the project will carry out to make the transition from the project to 'business as usual' – the handover period.

State the project success criteria.

The project will include the design and installation of streetscaping improvements on Union Street Central, Market to Guild Street (Phase 1 area) and Schoolhill & Upperkirkgate.

The **Union Street Central** intervention area includes the section of Union Street running from Union Terrace to Market Street.

Following an Options Appraisal exercise in June 2022, design work was instructed to progress on the option to include bus access to Union Street Central. The design comprises two lanes for cycle, bus, taxi and servicing access with intermittent lay-bys for buses and servicing to facilitate boarding and alighting. This will allow for pavement widening, clear pedestrian movement and accessibility, the introduction of urban greenery and potential for street occupation. Crossing points will be incorporated to facilitate pedestrian movement north and south.

Street furniture will be placed to one side to maintain a clutter-free, safe movement corridor for pedestrians and wheeled users. Feature paving will be used to highlight key architectural elements and buildings.

The Market to Guild Street Phase One will be delivered in parallel with the Aberdeen Market project and will include the following ineterventions:

- **East Green:** Widened pavement to south side; introduction of catenary lighting; making good of existing paving where required; and potential introduction of outdoor seating
- Hadden Street: Paving refurbishment/ making good throughout where required to ensure ease of access for all between the Market, The Green, Carmelite Street & Carmelite Lane, Rennie's Wynd and Guild Street; minimum four accessible parking bays included within close proximity to the Market; smoothness of paving quality upgraded along direct routes; increased footpath width adjacent the Market building to encourage footfall and spill-out of Market activity into The Green; retain existing kerb-lines, carriageway and both taxi ranks; new pavement to footpath outside Market; new in-ground street trees; existing paving made good where required.
- **Carmelite Street:** Additional street furniture added with new seating provided in central pedestrian area; catenary lighting intervention introduced to improve night-time use and public safety; through vehicle movement removed through the introduction of bollards (car park access retained); enhanced street greening with additional tree planting with existing shrub and herbaceous planting replaced; paving refurbishment/ making good progressed throughout where needed to ensure ease of access for all.
- Guild Street Crossing: new raised crossing across Guild Street connecting southern end of Carmelite Street and Rennie's Wynd to Union Square and Aberdeen Bus & Railway Stations.

Figure 3: Looking south towards Carmelite Street from the Market

Schoolhill forms an important civic role for the city, and includes Aberdeen Art Gallery, Cowdry Hall and Robert Gordon's College, while **Upperkirkgate** is an important retail hub which contains a range of local and national businesses and benefits from strong linkages to the St Nicholas and Bon Accord centres. At the eastern end of Upperkirkgate is Marischal Square, and St Nicholas Kirk and Klrkyard are situated on the south side, providing a key green space in the historic heart of the City Centre.

At peak times there can be significant traffic congestion which creates an environment that is daunting to pedestrians and cyclists and detracts from the streets ability to be enjoyed by residents and visitors. One of the key aims of this project is to create better and safer connections between Schoolhill and Upperkirkgate to the Belmont Street area.

The extension of footways and provision of new pedestrian focussed zones will enhance the setting and public realm around Schoolhill and Upperkirkgate to create an attractive and people-oriented area which can facilitate active travel.

Union Street East and Castlegate will include improvements to the route from the junction of Union Street & Market Street to the point where Castle Street ends, at the junction with Castle Terrace. Includes footpath widening, street furniture, improved lighting and enhanced street greening.

Union Street West and West End will include improvements to the section of Union Street running between its junction with Alford Place & Holburn Street to its junction with Bridge Street and Union Terrace, including increased space for pedestrians and cyclists, improved public transport interchanges, urban greenery, and potential street-trading space.

Market Streetscape Phase 2 will be delivered at a later stage, and will provisionally include:

- St Nicholas Street: Introduction of planting beds to complete a green city centre route, improved environment and creation of places for seating, outdoor spill-out space for businesses; enhanced planting to improve greening and visual amenity when reaching St Nicholas Street from Correction Wynd; potential green wall on Marks and Spencer façade (with potential to utilise murals to replicate the depth of green created by a living green wall); options for paving involve either improvements to edges where paving quality is poor, or full resurfacing to rejuvenate character and quality of the street; tree planting, improved wayfinding and interpretation to key moments such as the entrance to St Nicholas Kirkyard, path to Nethergate and towards Aberdeen Market, relaying of paving on St Nicholas Lane to provide smooth surface for cyclists; restoring historic street pattern.
- **Carnegie's Brae:** New paving surface to improve accessibility; lighting feature to create immersive journey; clean and restore tunnel walls to original stonework.

Figure 5: Looking North from Union Street to St Nicholas Street

Market Streetscape Phase 3 will cover Stirling Street, Exchange Street, Imperial Place Trinity Street and Trinity Lane, and will include street greening (new street trees added to existing tree pits on northern footway); outdoor seating and spill-out space for local food & beverage businesses; reinstatement of natural stone paving to the existing raised table at Trinity/ Wapping St junction (to improve free wheeled movement and accessibility for all); and a reconfiguration and reduction of bin storage locations to reduce on-street commercial waste clutter.

6.1 Out of Scope

List any notable exclusions, those areas that may be viewed as associated with the project or the affected business area, but which are excluded from the scope of the project.

The construction of the Market Building, the Queen Street redevelopment, George Street Mini Masterplan, the Aberdeen Beach redevelopments and the Justice Street roundabout are all out of scope and will be brought forward through separate Business Cases.

7. Options Appraisal

DescriptionDo nothingExpected Costs£0 additional capital cost. Road maintenance costs will continue to be covered through existing budget.Expected BenefitsRange of disbenefits including continued urban decline and growing vacancy rates and reputational damage.	7.1 Option 1 – Do Nothing			
Expected Costscovered through existing budget.ExpectedRange of disbenefits including continued urban decline and growing	Description	Do nothing		

Risks Specific to this Option	Deterioration of existing road surfaces; liability for slips, trips or falls; lack of accessible spaces; other city centre masterplan interventions, in particular the Aberdeen Market, Belmont Street Quarter, Queen Street, George Street and Aberdeen Beach could fail to achieve desired outcomes including meeting Low Emission Zone targets. Without appropriate intervention, Aberdeen will experience continued decline in city centre activity. There will be the risk of more retail units becoming vacant, fewer people, especially of a working age, willing to live in and around the city centre and an overall decline in business activity in Aberdeen.
Advantages & Disadvantages	Advantage - There is significant cost avoidance. Disadvantage – Missed opportunity to support the achievement of the City Centre and Beach Masterplan objectives (city centre vacancy rates currently stand at 19.7% overall, and at 25% in Upperkirkgate and 37.5% in Schoolhill ⁴ , and will rise further under this option). Challenges around limited pedestrian/cycle space; and poor lighting, wayfinding and accessibility will not be addressed. Nothing done to address the need to reduce vehicles in the city centre. Risk of continued decline and loss of businesses resulting in Aberdeen falling behind the modern standard of other city centres.
Viability	No new actions required, so viable.
Other Points	This options also goes against design industry good practice for city centre design. No new actions are required for no delivery timeline, constraints or dependencies for this option.

7.2 Option 2 – Do Minimum			
Description Do Minimum. Aesthetic improvements including street furniture and enhanced lighting			
Expected Costs	Capital cost: £10m (estimated)		
Expected Benefits	Improvement in street furniture and lighting will provide aesthetic benefits.		
Risks Specific to this Option	Public perception that little has changed		

⁴ Provided by ACC Business Improvement District Survey as of October 2022

Advantages & Disadvantages	Advantages Reduced capital cost. Improvement in street furniture and lighting to improve aesthetics of city centre. Disadvantages Missed opportunity to support the achievement of the City Centre and Beach Masterplan objectives of creating accessible exceptional public realm space and attracting business and anchoring growth in Aberdeen. Challenges around limited pavement/cycle space and wayfinding will not be addressed.
Viability	Low scale intervention so strong viability.
Other Points	Reputational damage to ACC

7.3 Option 3 – S	7.3 Option 3 – Streetscaping Improvements					
Description		Streetscaping improvements, including reducing Union Street to two vehicle lanes with bus laybys.				
	Total capital cost of £45.7m based on current designs, and an area-by- area breakdown of this is provided below. The total future costs for all phases is currently estimated at £144.0m but could vary significantly depending upon choice of paving materials. A holding assumption of £5k in annual maintenance costs has been assumed once construction is complete. A £50,000 equipment allowance has been added to cover the cost of a cherry picker for changes to lighting fixtures, as these are now set from the road.					
	phases:	the total co	sts are desc	cribed below, excl	uding all future	
Expected Costs	Description	Start	End	Capital costs	PVc	
	Union Street	Aug-23	Oct-24	£20,000,000	£19,036,677	
	Central					
	Market Jan-24 Jun-24 £5,100,000 £4,791,25 streetscaping Phase 1 Schoolhill and Oct-24 Nov-25 £21,000,000 £19,006,03					
	Upperkirkgate Equipment allowance	Oct-24	Oct-24	£50,000	£50,000	
	Total			£46,150,000	£42,883,967	
Expected Benefits	Total expected benefits are in the order of £147.5m. This estimate is based on: Active travel benefits The Department for Transport's Active Mode Appraisal Toolkit (AMAT) was used to calculate active travel benefits. ACC provided baseline footfall counter date on pedestrian and cycle movements for three points in or close to the intervention zone. However, only the people passing through the footfall counters on a bike					
	have been included in the active travel benefit calculations. Those who pass through city centre footfall counters on foot are likely to be in town					
\$aszbwxv1.docx	Projec	t Stage: Def	fine	-	Page 17 of 36	

for a shopping/leisure trip rather than out for a walk, and many of them will have travelled into town by car or on public transport, so are unlikely to receive much of an active travel benefit.				
Any increase in these numbers is likely to be more to do with the city centre being a more pleasant place to shop than to it being a safer place to go for a walk. By contrast most people who pass through a counter on a bike are likely to have cycled into the city centre. For this group, it is therefore more reasonable to assume that the streetscaping and reduction in traffic movements incentivised them to cycle into town, and therefore reasonable to claim the active travel benefits.				
An annual average Daily Cyclist Count of 709 was reported on Union Street between Market Street and Union Terrace in 2020. The number of cycling trips within the study area has been assumed to increase by 20% (benchmarked against the similar streetscaping project in Altrincham as described in the Executive Summary) as the roads will be safer and more attractive for cyclists. It was also assumed that 10% of an average cycling trip will use the intervention.				
These values were the input data for AMAT and provided £1.53m in PVb.				
Construction spend				
- Total spend: £46.15M				
 Turnover to GVA ratio for Aberdeen construction sector of 0.43 applied to capital spend 				
 Deadweight: 0% (no spending would happen on site in the counterfactual scenario) 				
 Displacement: 20% (project will lead to some displaced construction activity elsewhere) 				
 Leakage: 10% (some of the construction providers will be non- local) 				
 Multiplier: Scottish Government input output tables provides a Scotland wide multiplier of 1.87 for the construction sector. It has been assumed that 50% of these indirect and induced benefits will be retained locally. 				
Net discounted economic impact of the construction spend is in the order of £19.5m				
Footfall impact of retail GVA				
- Full time equivalent employment: figures from the Business Register and Employment Survey indicate that, in 2020, there were 1,275 people employed full time and 1,725 people employment part time in the retail and food & beverage sectors in the Union Street Central area, equivalent to a full time equivalent (FTE) employment of 2,138.				
 Turnover and GVA: this FTE employment contributes an estimated £224 million turnover and £54 million GVA to the national economy, based on turnover-employment and GVA-employment ratios from Scottish Annual Business Statistics. 				

	 We have assumed a 20% uplift in footfall and retail sales under this option. This is once again broadly based on the increase in footfall and sales experienced by the streetscaping project in Altrincham. Based on these assumptions, we estimate that the 30-year discounted economic impact of this option will be £206 million. However, to convert this GVA value to a net GVA value, several additionality assumptions were applied: 				
		Value	Rationale		
	Deadweight	0%	In the absence of this intervention, development will come forward or timescale.		
	Displacement	50%	In the absence of this intervention, significant contribution would still food & drink. For example, a come food & drink industry would be so centre for work wanting to buy lun regardless of a streetscaping inter	be made to retail and mon contribution to meone in the city ich will still do so	
	Leakage	0%	No leakage adjustment was applied are expected to be retained within Centre.		
	Multiplier 1.23 GVA Type II multiplier for retail of 1.45 was applied account for indirect and induced benefits retained across Scotland. Only 50% of the national multipli was applied based on the assumption that only a quarter of the indirect and induced benefits would retained locally.				
	impact of the Str Aberdeen City C Total Economic I	eetscapi entre. oenefits	ons results in an estimated £1 ng contribution to retail and fo of Option 3 are provided in the nomic Impact of Option 3	ood & drink in

Risks Specific to this Option		al impac	t on existing services association	•	

⁵ Includes impacts on reducing congestion, reducing infrastructure maintenance costs, reducing accidents, improving local air quality, reducing noise and greenhouse gas emissions, improved health, reduced absenteeism and improved journey ambience, adjusted to account for adverse impact on Government fuel duty receipts.

	Quality risks - including insufficient ACC resource to deliver the project
	Management issues including short-term disruption to businesses and
	displacement of traffic flows.
	Construction Inflation – Impacting on total project development costs.
	Advantages
Advantages & Disadvantages	Improved accessibility and increased cycling and walking (AMAT statistics). There will be reduced vehicle usage and consequently improved air quality. Improvements in lighting and way-finding will also be realised. This option also supports wider City Centre and Beach Masterplan in driving business growth and attracting visitors. Disadvantages Significant capital costs hinder the affordability of the option. There is also potential for short-term disruption both to local residents and to road users.
Viability	RIBA 3 (Spatial Co-ordination) designs and independent detailed costings have been prepared for Union Street Central, Market Phases 1 & 2, Schoolhill and Upperkirkgate.
	RIBA 3 designs and independent high-level costings have been prepared for all other project elements. No land consolidation challenges so option is considered viable at this stage.
	Delivery Timeline:
	 Union Street Central construction – Q3 2023 – Q4 2024
	Market Streetscape phase 1 construction – Q1 2024 – Q3 2024
	 Schoolhill Upperkirkgate construction – Q4 2024 – Q4 2025
	Assumptions: The economic modelling assumptions are detailed in full in Section 18. The assessment was informed using various industry standard sources/tools including Scottish Annual Business Statistics and the Department for Transport's Active Mode Appraisal Toolkit (AMAT).
	Constraints of Option 3 include:
Other Points	Traffic regulation orders and road planning consents:
	Material availability:
	 sufficient manpower in terms of deliverability:
	consideration of utilities and basements:
	corresponding Market Building development
	• maintained service, emergency and delivery vehicle access:
	Business continuity & resident access
	The success of the project is also dependent on the standards of construction, and on the selection of a design that makes ongoing maintenance of the project as cost effective as possible. This will be dependent on the following:

 Consistent paving of concrete slabs (to help minimise inventory costs)
 Consistent use of materials across city centre projects.
 Consideration for underground utility networks that may be disrupted or impaired during construction
 Selection of materials/appliances that can be readily replaced in subsequent years. For example, street lighting that doesn't use specific and hard to source lightbulbs

7.4 Scoring of Options Against Objectives

Use the table below to score options against the objectives in order to create a shortlist of options to be considered.

Objective	5	Options Scoring	J Against Objectives
	1	2	3
Improve walkability and cyclability of project area	0	2	3
Improve quality of streetscape	0	1	3
Reduction in CO2 emissions and air pollution	0	0	3
Attract visitors to Aberdeen	0	1	3
Affordability	3	3	1
Vehicle displacement effects and traffic disruption	0	0	0
Create jobs	0	1	3
Alignment with partnership agreement	0	1	3
Total	3	9	19
Ranking	3	2	1

Scoring

Fully Delivers = 3 Mostly Delivers = 2 Delivers to a Limited Extent = 1 Does not Deliver = 0 Will have a negative impact on objective = -1

7.5 Recommendation

Using evidence based on the options appraisal and the objectives scoring, clearly articulate the recommended option, showing the best fit against the project's stated objectives, and balancing cost, benefits and risk. Note, if an option fails to deliver any essential objective then it must be discounted as unsuitable. The recommendation should not be made on objectives scoring alone but the table can be used to eliminate those options that score poorly as a first stage, with the second stage being a more detailed analysis of the remaining options. Bear in mind:

- Investment Appraisal
- Assumptions
- Constraints
- Dependencies

Based on the above scoring criteria and analysis, the recommendation is that Option 3 represents the preferred option. This option is anticipated to perform best in improving the overall quality of streetscape in Aberdeen through increasing cycling and walking opportunities, subsequent reductions in carbon emissions and attracting visitors to the city in a manner that minimises disruption to local residents and businesses. Although it scores relatively poorly under affordability, Option 3 seeks to efficiently address the key objectives of the City Centre and Beach Masterplan.

Option 3 is also the most likely to address the equality of access needs of all users including users with disabilities and those reliant on public transport. It is also the option most likely to carry public support.

8. Benefits

In the tables below, identify the key benefits the project will deliver.

All benefits need to be measurable, realistic and have a baseline or comparable starting point. These benefits will be monitored during and after the project close to gauge project success and value for money. If a benefit is more subjective, then that should be supported by, for example, staff or customer surveys taken **before and after** the project.

Give an idea of the total financial benefits, if these exist.

List any dis-benefits where appropriate, e.g. the loss of a disposal receipt where it is proposed to utilise a surplus building instead of selling it.

Benefit	Measures	Source	Baseline	Expected Benefit	Expected Date	Measure Frequency
Increase of 20% in footfall and retail sales, benchmarked to a similar streetscaping project in Altrincham ⁶ . 9. Costs

Use the tables below to provide cost information. Costs must include capital investment and where relevant any ongoing revenue costs incurred by the project or as a result of the project.

The source/basis of any estimates should be clearly identified.

Refer to the Government Green Book and the Supplementary Guidance on Optimism Bias for information on determining costs. Outline any assumptions in estimating costs in Section 17, **and** confirm in the Checklist that you have followed this guidance.

Green Book Supplementary Guidance Optimism Bias

The Green Book 2022 (HM Treasury Guidance)

To improve the design development process for capital projects there is a need to consider full life cycle costs, including maintenance. Therefore, costs should be considered at least over a 5-year period. It is an estimate of the resources and capabilities (people, physical resources, and funding) needed to deliver the project and sustain the benefits. The estimates need to cover both the direct project costs and the ongoing (business as usual) costs for the lifetime over which the benefits are to be considered.

Include information on where the budget will come from.

Full costs breakdown to be included.

Any impact on business as usual or service delivery.

9.1 Project Capital Expenditure & Income

10. Key Risks	
Description	Mitigation
Fully explain any significant risks to the project that you are aware of, especially those which could affect the decision on whether and in what form the project goes ahead.	Details of any mitigating action already taken or suggested.
Append your full Risk Log if available.	
General lack of material and resource availability	Early identification of material types and source to guarantee supplies. Engagement with local stone provider and investment required.
Loss of funding engagement with partner organisations & stakeholders consequences - Some elements of match funding may not be deliverable (SUSTRANS, UK Government LUF)	Ensure on-going funding engagement with key stakeholders. Develop and programme a funding tracker. Linking to engagement plan.
Lack of public, key community groups and stakeholders responding through consultation Consequences - Diminished support and/or opposition from community & users	Ensure on-going engagement with the public, community groups, and stakeholders as an integral part of project delivery. Robust engagement plan required, key engagement with milestones Streets-UK appointed in Feb 2022 to manage and coordinate across all projects.
Project costs/inflation escalating over and above available funding. Consequences - Financial risk to the Local Authority with the possibility of an undeliverable project	Have regular budget reviews at client and design team level, ensure clear briefs are issued to the project team and ensure a robust project management structure is in place. Include an appropriate inflation allowance.
Rationalisation of buried Utilities	ACC Urban Realm manual refers to potential for underground utility & services covers (e.g. valve chambers, fire hydrants, draw-pits, etc) to be realigned to improve aesthetics of new surfacing works. If required, then knock-on impact on services installations could be significant in terms of disruption and costs. ACC confirmed there is a desire to align existing service chambers / draw pits etc. in the footpath although appreciated this may not be possible in all cases due to cost.
Unforeseen buried services and structures	Risk transfer through surveys to identify buried services and structures

11. Procurement Approach

If this project will involve the procurement of products or services, describe the approach that will be taken based upon the recommended option.

The Design Teams must conduct a check on the Health & Safety track record on tender documentation and submission prior to award and confirm this has been done.

The project is to be delivered by hub North Scotland who are a strategic development partner for the planning, procurement and delivery of community-based infrastructure projects across the north of Scotland. Hub North Scotland comprises 16 public sector organisations, the Scottish Futures Trust and private sector partners in a joint venture company known as a hubCo with the purpose of working collaboratively to deliver inspiring projects for communities and best value for participants. Aberdeen City Council are one of these public sector organisations and have been part of the hub initiative since 2011.

The key purpose of the hub initiative is to establish a long-term partnering relationship between hubCo and Aberdeen City Council and to procure the provision of appropriate infrastructure and related services involved in providing Community Services with the aim of: a) improving the efficiency of delivery of community-based facilities; b) delivering economies of scale through shared facilities; c) making the best use of public resources; and d) providing continuous improvement in both cost and quality in public procurement.

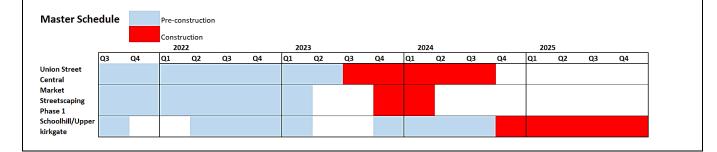

Hub North Scotland's dedicated supply chain members are working collaboratively with Aberdeen City Council to develop, design and deliver all projects within the ACC City Vision programme. All procurement is carried out in strict compliance with Hub North Scotland's Project Delivery Method Statement with a completely open book approach to project costs which is continually benchmarked and reviewed to maximise efficiency, accountability and demonstrate continuously improving value for money. The Hub North Scotland supply chain is structured to include both local and national partners maximising economies of scale whilst providing opportunities to local companies. Project development plans have specific focus on community and stakeholder engagement to maximise outcomes for end users.

12. Time

12.1 Time Constraints & Aspirations

Detail any planned or agreed dates, any time constraints on the project or the affected business areas and any other known timescales.

A breakdown of the pre-construction and construction timescales of each project element is provided below. All timescales are dependent on utilities, material availability and supply chain generally:

12.2 Key Milestones								
Description	Target Date							
Union Street Central construction	Aug 2023 – Oct 2024							
Market Streetscape phase 1 construction	Jan 2024 – Jun 2024							
Schoolhill Upperkirkgate construction	Oct 2024 – Nov 2025							

13. Governance

Include any plans around the ownership and governance of the project and identify the people in the key project roles in the table below.

Role	Name	Service	
SRO	Chief Officer- Capital	SRO	
Programme Manager	Hub North Scotland	Programme Management	
Project Manager	Mott MacDonald	Project Management	
Lead Contractor	Balfour Beatty	Lead Contractor	
Lead Designer and Landscape Architect	Ryder/LDA	Lead Designer and Landscape Architect	
Cost Consultant	Currie and Brown	Cost Consultant	
Principal Designer	Currie and Brown	Principal Designer	

14. Resources

List the staff resources and expertise required to implement the project. Ensure support services are included, such as Project Management, Legal, Procurement and Communications.

Task	Responsible Service/Team	Start Date	End Date
Traffic Regulation Order	Planning	Mar 23	Jul 23
Road Construction Consent/Section 56	Planning	Jun 23	Sep 23

15. Environmental Management

Fully explain any impacts the project will have on the environment (this could include, eg, carbon dioxide emissions, waste, water, natural environment, air quality and adaptation). Include both positive and negative effects and how these will be managed. Include details on how this has been assessed, giving an idea of the cost implication if this exists.

The Climate Change (Emissions Reduction Targets) (Scotland) Act 2019 put in place a target for net zero greenhouse emissions by 2045 in Scotland, accelerating new and updated associated policy interventions. In response, the city-wide climate journey is progressing. Following production of a Net Zero Vision for Aberdeen (2020), the Net Zero Aberdeen Routemap was produced collaboratively and approved in February 2022, setting the pathway for a net zero city by 2045. The project will do everything possible to align with existing and emerging climate and resource efficiency commitments and targets.

The project will minimise the embedded carbon of construction through maximising the use of locally sourced materials. The latest ACC Procurement Paper details intentions to use local granite stone from Avochie Quarry near Huntly rather than import materials from overseas.

The project will also contribute to a reduction in CO2 and particle emissions by reducing vehicular movements through Aberdeen City Centre. Planters will absorb carbon and improve quality of local environment. Air quality in the city centre will also improve because of reduced traffic in the city centre.

The Council anticipates that the intervention will deliver a 40-60% general traffic reduction in Union Street West, a 60-80% reduction in Union Street Central, and a 80-95% reduction in Union Street East (Source: Aberdeen City Centre Masterplan Engagement Boards, LDA Design, October 2022).

These proposed traffic conditions will contribute significantly to the positive environmental impact of project.

Furthermore, no impact on waste collection or treatment of surface water is anticipated from the project.

	Yes	No		
Is a Buildings Checklist being completed for this project?		\boxtimes		
If No, what is the reason for this?				

Project does not involve the construction of a new building

16. Preserving Our Heritage

Describe fully any impacts the project will have on the heritage of the city or more widely in the region or nationally. This could include but is not exclusive to the following examples:

- Specific historical items of interest;
- Features of significant local or regional importance/interest;
- Granite elements of existing structures.

Include both positive and negative effects and how these will be managed.

Include details on how this has been assessed, giving an idea of the cost implication if this exists.

This project will provide significant improvements to the city centre streetscape of Aberdeen and consequently its cultural heritage. Encouragement of increased walking and cycling will reduce traffic and congestion in the city centre and elevate the attractiveness of regionally significant sites like Union Street. Construction materials will also align with the granite elements already present across the city centre.

17. Stakeholders

List the key interested individuals, teams, groups or parties that may be affected by the project or have an interest in it, including those external to the organisation. Show what their interest would be and their level of responsibility. Also note any plans for how they will be engaged including the use of any existing communication channels, forums or mechanisms already in place.

In the event the Business Case projects a total capital expenditure of more than £10 Million, stakeholders should include "ACC Bond Investors" who may require to be communicated with through the London Stock Exchange.

The project will impact on business owners in the intervention area, who may be inconvenienced by traffic disruption in the short term but who also stand to benefit from the increase in footfall that the interventions will support.

It will also impact on residents within the area, who will experience similar disruption and potential loss of parking amenity but will stand to benefit most from the improved placemaking and reduction in particle emissions.

A community engagement programme involving local residents and business will be developed and maintained throughout the project delivery stages to help understand these concerns mitigate the adverse issues experienced by these groups.

The project will also impact upon vehicular users visiting the city centre, and on bus service provision across the city centre. The Council has modelled the transport implications of these, and the other City Centre Masterplan proposals.

Internally, the project will also impact on the Council's road maintenance and environmental services teams budgets.

The road maintenance team advise that the development should use the same streetscaping materials as those used in other parts of Aberdeen City Centre to avoid unnecessary inventory storage costs. They also advise that access should be maintained for service vehicles and gritters, including sufficient space to exit the vehicles. Lighting installations should be accessible from the road for maintenance purposes and should use fittings that are easily replaceable. Planting that is resilient to spray from gritters should be used in planters and hanging baskets. Utilities providers should be given advanced notice of planned road works during the installation process so that they can co-ordinate any planned asset repairs or replacements to coincide with this.

The environmental services team advise that the maintenance costs associated with the planters and hanging baskets can be minimised by exploring opportunities for commercial sponsorship of green spaces, or through the usage of Aberdeen Inspired funding.

18. Assumptions

Document the high-level assumptions that have been made during the development of the Business Case and any other unanswered questions that may be significant. Refer to the Supplementary Guidance on Optimism Bias and detail the assumptions you have made in constructing the costs and business case.

Green Book Supplementary Guidance Optimism Bias

An Optimism Bias of 21% is assumed, the central percentage of the upper and lower estimates for standard civil engineering.

HM Treasury Green Book standard discount rate of 3.5% has been used to discount costs and benefits over a 30-year appraisal period to derive appropriate BCRs.

Benefit modelling assumptions:

Construction spend

- Turnover to GVA ratio (for construction sector) from the Scottish Annual Business Statistics of 0.43 was applied to capital spend
- Deadweight: 0% (no spending would happen on site in the counterfactual scenario)
- Displacement: 20% (project will lead to some displaced construction activity elsewhere)
- Leakage: 10% (some of the construction providers will be non-local)
- Multiplier: Scottish Government input output tables provides a Scotland wide multiplier of 1.87 for the construction sector. It has been assumed that 50% of these indirect and induced benefits will be retained locally.

Active travel benefits

Baseline footfall was provided by the Council, specifically how many people currently visit Aberdeen City Centre, and these streets in particular, broken down by number of pedestrians and number of cyclists. DfT's AMAT tool was then used to calculate the active travel benefits of the project.

Footfall impact of retail GVA

- Full time equivalent employment was sourced from the Business Register and Employment Survey.
- Turnover and GVA estimates were based on turnover-employment and GVA employment ratios from Scottish Annual Business Statistics in Aberdeen City.
- We have assumed an 20% uplift in footfall and retail sales under this option. This is benchmarked against the increase in footfall and sales experienced based on a similar streetscaping project in Altrincham.

19. Dependencies

Document any projects, initiatives, policies, key decisions or other activities outside the control of the project that need to be considered or which may present a risk to the project's success, or on which this project depends.

External factors that may present a risk to the viability of the project include the development the bus priority measures, and the completion of the South College Street construction works.

The success of the project is also dependent on the standards of construction, and on the selection of a design that makes ongoing maintenance of the project as cost effective as possible. This will be dependent on the following:

- Consistent paving of concrete slabs (to help minimise inventory costs)
- Consistent use of materials across city centre projects.
- Consideration for underground utility networks that may be disrupted or impaired during construction
- Selection of materials/appliances that can be readily replaced in subsequent years. For example, street lighting that doesn't use specific and hard to source lightbulbs

Sufficient maintenance budget allowances to accommodate the above will also be crucial to the project's success, and estimates of appropriate budgetary allocations have been included within this business case.

20. Constraints

Document any known pressures, limits or restrictions associated with the project.

The following issues could create constraints for the implementation of the project:

- Traffic regulation orders and road planning consents: all appropriate consents must be in place before construction work can commence
- **Material availability**: road surfacing materials and lighting materials must be obtained for use in the project construction phase. The Council should also ensure that these materials can continue to be sourced into the future as and when replacement work is required. The materials used should be consistent where possible with those used elsewhere in the city centre to limit future inventory costs
- **Workforce**: The Council and its contractor will need to ensure that sufficient workforce is available to deliver the project within the planned timescales
- Utilities and basements: many of the streets in the intervention area have gas, electricity, water and wastewater infrastructure buried beneath them. Union Street Central has an additional issue of vaulted construction and basements of some buildings extending underneath the street. These issues must be fully understood before excavation can begin.
- **Market Building development**: the proposed project will be undertaken in parallel with the development of the Market Building and involves streetscaping activities on each of the streets surrounding this building. Access to the Market Building site will

need to be maintained to ensure that it is still accessible to people working on site and for the delivery of materials and building equipment.

- Service, emergency and delivery vehicle access: Access for service vehicles (including refuse collection) and for emergency and delivery vehicles will need to be maintained at all times
- Accessible parking: alternative and accessible parking provision will need to be arranged for blue badge holders in the project area

Business continuity & resident access: access will need to be maintained for local residents and for local businesses and their customers.

21. ICT Hardware, Software or Network infrastructure

List any new ICT systems or changes likely as a result of the project. If there are no ICT changes, then record as 'none'.
