#### PRIMARY CARE STABILTY LEVELS (Non-standard update frequency)

# DEFINITIONS

METRICS	USED		Primary Care	CTAC calls and attendance	Provided by ACHSCP. Community Treatment and Care services appointments booked and attended. Cal numbers and results also included.
Datix	Falls	This is taken from DATIX as all falls listed under the ABCITY organisation where the incident result is provided as HARM/NO HARM/NEAR MISS.		Primary Care Stability Levels	Supplied by the Primary Care Contracts Team. Practices contact the team with their current 'Level' which can range from full services to full suspension of services.
Delayed Discharges	Complex and Code 100 Bed Days	As above however only for complex and Code 100 delays. Code 100 cases are for extremely complex cases and are typically ongoing discharge cases with bespoke requirements. Code 100 cases are not considered delayed discharges in the usual sense and are not published. Complex codes for ward and care home closures have been excluded.	Rosewell House		There are beds which are allocated for people who are presenting as unwell but not requiring an admissi to an acute hospital setting. These beds may prevent the person from an avoidable admission to hospita or a crisis driven avoidable admission to a mainstream care home. For the dashboard these are identified using the IsFirstWard flag.
	Complex Delays	A delay meeting the definition for delayed discharge for which the reason for delay is considerd a 'Complex' reason (full delay reason codes available via PHS). These are typically delays where the HSCP has less control (i.e. Adults with Incapacity, Guardianship, Specialist Facility requirements).	_	Ward Starts (RWH) -	Admission to Rosewell House wards from anywhere in the system at any point during a patients stay, including transfers from any other ward/locations as well as first ward admissions for the given date rang. Individuals who have multiple movements into the ward in a date range are counted for both movements
	Delayed Discharges			Average LOS	Calculated as the number of hours between the ward start and the end date divided by 24 to give a decir day value. This value is expressed as an average for all ward end dates (discharges and transfers) durin the given date range.
	Monthly Bed Days	The total number of bed days in a month occupied by a delayed discharge. Note this is not the total length of delay.		Average Occupancy % -	Calculated using the overnight occupancy for a given ward or group of wards divided by the allocated be available for the applicable ward(s), given as a percentage.
	Standard Delays	A delay meeting the definition for delayed discharge for which the reason for delay is considerd a 'Standard' reason (full delay reason codes available via PHS).		Max LOS	As above however, only the maximum LOS value for a discharge that has occurred in the given date ran
Hospital at Home	Allocated Beds Available	Allocated beds is pulled directly from the applicable field in Trakcare for that ward.		Ward Starts -	Admission to SOARS wards from anywhere in the system at any point during a patients stay, including transfers from any other ward/locations as well as first ward admissions for the given date range. Individuals who have multiple movements into the ward in a date range are counted for both movements
	Average % Occupancy	Calculated using the overnight occupancy for a given ward or group of wards divided by the allocated beds available for the applicable ward(s), given as a percentage.	Social Care	Care Searches in Place	Provided by ACHSCP. The total number of cases which remain open and awaiting care (a single client of have multiple cases).
	Home	Admission to Hospital at Home wards from anywhere in the system at any point during a patients stay, including transfers from any other ward/locations as well as first ward admissions for the given date range. Individuals who have multiple movements into the ward in a date range are counted for both movements.		Clients with Unmet Needs	Provided by ACHSCP. The number of clients who have been waiting over 14 days for one or more open cases for social care.
	Overnight Occupancy	The total number of occupied beds at midnight for The given date.		Weekly Carer Hours	Provided by ACHSCP. The total number of hours required to satisy the care requirements for all open cases.
Mental	Probable	'Probable suicides' refers to deaths from intentional self-harm and events of undetermined intent. The latter category includes cases where it is not clear whether the death is a suicide. Data used for this chart is from		Weekly Unmet Needs Carer Hours	Provided by ACHSCP. The total number of hours required to satisy the care requirements for all open cases that have been open for 14+ days.
lealth	Suicides RCH Average	published data. Calculated using the overnight occupancy for a given ward or group of wards divided by the allocated beds	Strategy	Adapations	Provided by ACHSCP. Adaptations completed split by major/minor.
	Overnight Occupancy	available for the applicable ward(s), given as a percentage. These are admissions which have ICD10 codes given below. Note that this figure can vary and lag as diagnosis		Telecare	Provided by ACHSCP. Telecare and community alarm clients.
Prevention	Drug Related Admissions	d is determined and amended on Trakcare - this can take a few months to appear within the data. Recent data should be considered as changable. Alcohol Related– F10 codes. Drug Related – F11 – F19 codes.	Ward 102	Daily Boarders -	A patient who is physically located on a different ward but should have been admitted to the given ward, however no bed was available to admit them. For example a patient who is under the care of Ward 102 may use a bed in another ward.
	Sexual Health Clinic Activity	Provided by ACHSCP for the dashboard and include face to face and phone/virtual visits.		Ward 102 Ward Starts	Admission to Ward 102 from anywhere in the system at any point during a patients stay, including transf from any other ward/locations as well as first ward admissions for a given date range. Individuals who have

Pencies involved in planning that patient's discharge, and who continues to occupy the bed beyon sion must be made as part of a multi-disciplinary process and focuses on the needs of the no unnecessarily long stays in hospital for patients. They also affect waiting times for NHS care, a h funded support to be discharged to their own home (where appropriate) or another community ent system able to support them with their preferred placement. They may also need a bit more me care availability or a place in their preferred placement. They may also need a bit more me care availability or a place in their preferred care home or Very Sheltered housing scheme noi to move on from the hospital and release bed capacity.  valent to that provided within a hospital.  pital. Services the volunteers offer include shopping, prescription collections, transport to me and going out. Reablement may be used to support discharge from hospital incomment. Rehabilitation may be required following an injury, surgery, disease or illness or bacaus is, such as apinal cord injury, stroke, or a fracture. Rehabilitation is provided by a multidisciplinary chologists, physical medicine and rehabilitation doctors, and rehabilitation nurses. It addresses is the person be as independent as possible in everyday activities a

There are beds which are allocated for people who are presenting as unwell but not requiring an admission to an acute hospital setting. This may be in a care home for example which provide 24 hour care and support to a person who may be requiring additional care and support and in some cases nursing input. These beds may prevent the person from an avoidable admission to hospital or a crisis driven avoidable admission to a mainstream care home.
