## Planning application no.161769

We would request that the applicant consider Rain water attenuation storage such as water butts are incorporated in the design. However this does not form a condition to be met prior to approval. In order to not increase the surface water run off, we would strongly recommend the adoption of permeable block paving. However this does not form a condition to be completed prior to approval.

Regards  
Katy Joy Goodall - Flooding & Coastal

Pete Leonard

Corporate Director
