

Additional SIMs

Published 1984

Source map scale - 1:2,500

The SIMs (Contours, Survey's, Survey of Information on Mortality) are further, more additions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1984, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

**Additional SIMs
Published 1993**

Source map scale - 1:2,500

The SIM cards (Corona Survey's Survey of Information on Microfilm) are better, more accurate maps which were produced and published by the Ordnance Survey in 1993. They are based on the original maps of 1984, and contain detailed information on buildings, roads and features. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data Published 1994

Source map scale - 1:2,500

Large Scale National Grid Data represents 814 points (Ordnance Survey's
Third Edition) of National Grid coordinates in Great Britain, published in 1994.
These include the 100m grid squares of the National Grid, and the 100m
grid squares of the 1948 datum. The data is published in a vector format
providing detailed information on houses and roads, but not to show any
topographic features such as vegetation. These maps were produced at scales
1:2,500 and 1:1,250 scales.

Map Name(s) and Date(s)

Large-Scale National Grid Data Published 1995

Source map scale - 1:2,500

Large Scale National Grid Data incorporated 88M ortho (Orthometric Survey) Survey of Ireland data (published in 1992) and ortho (Orthometric Survey) data until 1990. These maps were the first outputs of digital methods and do provide detailed information on houses and roads. Do not tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Index Map

For ease of identification, your site and buffer have been split into Blocks, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Block
Each site represents a 110,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several blocks (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the site "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1,2500 plot area. Segments that have post lines associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each site.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and referenced in the index map to assist reference to any study located on site. Therefore a quadrant reference of (NW) will be in Site A, Segment 1 and the NW Quadrant.

A selection of organisations who provide data within the report:

Envirocheck reports are compiled from 136 affiliated sources of data.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency, it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Aberdeenshire
Published 1869
Source map scale - 1:10,560

The Envirocheck system data is derived from maps predominantly west of the scale and the original source was published in 1869. In 1950, the 1:25,000 scale maps were digitised and the original data was used as a base for the 1:10,560 scale. The published data may have been altered since then due to the fact that the original data was based on the Ordnance Survey system. Since 1950, an O/S scale study or group of studies, using the original data, has been carried out in the area. This has resulted in a number of changes to the original data, with all changes being a standardised process. The main changes are: the original data was published with the Ordnance Survey (OS) scale of 1:25,000. This was converted to the 1:10,560 scale. The original data was published with the Ordnance Survey (OS) scale of 1:25,000. This was converted to the 1:10,560 scale. The original data was published with the Ordnance Survey (OS) scale of 1:25,000. This was converted to the 1:10,560 scale.

Burnside Poultry Unit, Little Clontarf, Kintellar, ABERDEEN, AB21 0TL

Aberdeenshire
Published 1928

Source map scale - 1:10,560

The historical maps shown were reproduced from maps (indemnity held) in the 1:25,000 adopted for England, Wales and Scotland in the 1940's in 1954 subject to updates and adjustments for missing urban areas. These maps were then scanned into a 10,560 map. The published data given transfers to other maps based on the Ordnance Survey datum. Before 1938, all OS maps were based on the Cassini (or Cassinoid) datum, which is independent surveys of a single country or group of countries, plotted on to a common projection, which updated works. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. This Provisional Edition was produced with an arbitrary datum and other strategic data (not included) - with an arbitrary datum and other strategic data (not included) - with an arbitrary datum and other strategic data (not included). These maps were initially compared with the National Grid, in 1975, and the 1:10,560 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping
Published 2000
Source map scale - 1:10,000

This technical index was prepared from the Ordnance Survey's 1:10,000 colour raster map which replaced the old 1:10,000 map which was published in 1970. The data is highly detailed showing buildings, trees and any other features as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information includes the relevant county, unitary authority, district, civil parish and constituency.

10k Raster Mapping
Published 2006

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. The raster maps are derived from Landmark's highly detailed 1:10,000 maps compiled in 1992. The data is highly detailed showing buildings, terrain and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information includes county, unitary authority, district, civil parish and constituency.

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced using OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000 covering the whole of Great Britain. It has been designed for creating practical mapping products. VectorMap Local is derived from large-scale information surveyed at 1:2500 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10,000 scale (mountain, moorland and other estuary areas).
