|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| Assessment of Climate Emissions)?                                                                                                                                                                                                                                                                |                                            | Nearest local facilities are more than 800m away. There are no bus stops within 400 or 800m of the site. There is a Park and Ride about 1km southwest of the site. Although there is a Park and Ride within 1km, it is highly likely that many people will travel by car from far to work. Therefore, traffic into the built-up area is likely to increase and have a long term negative impact on climatic factors through emissions from an increase in vehicular movements. | GIS Layers for cycle lanes/facilities                                      |                          | technologies to reduce the predicted carbon dioxide emissions by at least 15% below 2007 building standards.<br><br>LDP Policy encourages waste minimisation and sustainable and active travel.                          |                           |
