| <p><u>Non-designated landscape features and key landscape interests</u></p> <p>Does the proposal ensure that development does not exceed the capacity of the landscape to accommodate it? Such as current settlement boundaries, existing townscape and character of surrounding area?</p> | Landscape                                           | The landscape setting of this section of the lower Dee valley is characterised by the natural elements of the river Dee, open parkland and trees, which combine to soften the transition from rural Aberdeenshire to the urban environment of Aberdeen city centre on key approach routes. The landscape setting on the southern side of the river is already somewhat compromised by the existing Banks of Dee football stadium and care home developments, both of which sit on higher ground than the application site. As a result, the precedent of development to the east of the park is already established. | Landscape Character Assessment<br><br>Existing LDP allocations for Greenbelt and GSN<br><br>Site Visit | --                                 | Careful siting, design, massing and to limit impacts.                                                     | -                               |
